Variance

7/10/2006

Definition

Let X be a numerically valued random variable with expected value $\mu = E(X)$. Then the *variance* of X, denoted by V(X), is

$$V(X) = E((X - \mu)^2)$$
.

Standard Deviation

The standard deviation of X, denoted by D(X), is $D(X)=\sqrt{V(X)}.$ We often write σ for D(X) and σ^2 for V(X).

Example

Consider one roll of a die. Let \boldsymbol{X} be the number that turns up.

$$\mu = E(X) = 1\left(\frac{1}{6}\right) + 2\left(\frac{1}{6}\right) + 3\left(\frac{1}{6}\right) + 4\left(\frac{1}{6}\right) + 5\left(\frac{1}{6}\right) + 6\left(\frac{1}{6}\right) \\ = \frac{7}{2}.$$

x	m(x)	$(x - 7/2)^2$
1	1/6	25/4
2	1/6	9/4
3	1/6	1/4
4	1/6	1/4
5	1/6	9/4
6	1/6	25/4

$$V(X) = \frac{1}{6} \left(\frac{25}{4} + \frac{9}{4} + \frac{1}{4} + \frac{1}{4} + \frac{9}{4} + \frac{25}{4} \right)$$
$$= \frac{35}{12},$$

Calculation of Variance

Theorem. If X is any random variable with $E(X) = \mu$, then

$$V(X) = E(X^2) - \mu^2$$
.

Example (cont)

$$E(X^2) = 1\left(\frac{1}{6}\right) + 4\left(\frac{1}{6}\right) + 9\left(\frac{1}{6}\right) + 16\left(\frac{1}{6}\right) + 25\left(\frac{1}{6}\right) + 36\left(\frac{1}{6}\right) \\ = \frac{91}{6},$$

and,

$$V(X) = E(X^2) - \mu^2 = \frac{91}{6} - \left(\frac{7}{2}\right)^2 = \frac{35}{12} .$$

Properties of Variance

Theorem. If X is any random variable and c is any constant, then

 $V(cX) = c^2 V(X)$

and

$$V(X+c) = V(X) \ .$$

Theorem. Let X and Y be two independent random variables. Then

V(X+Y) = V(X) + V(Y).

Properties of Variance

Theorem. Let X_1, X_2, \ldots, X_n be an independent trials process with $E(X_j) = \mu$ and $V(X_j) = \sigma^2$. Let

$$S_n = X_1 + X_2 + \dots + X_n$$

be the sum, and let

$$A_n = \frac{S_n}{n}$$

be the average. Then

$$E(S_n) = n\mu ,$$

$$V(S_n) = n\sigma^2 ,$$

$$E(A_n) = \mu ,$$

$$V(A_n) = \frac{\sigma^2}{n} .$$

Practice Problems

Four balls are drawn at random, without replacement, from an urn containing 4 red balls and 3 blue. Let X be the number of red balls drawn.

- 1. What is the range of X?
- 2. What is the probability that X = 2?
- 3. What is the probability that X = 2 if, each time a ball is drawn, it is replaced in the urn?

You deal yourself a hand of 4 cards from an ordinary 52-card deck.

- 1. What is the probability of getting one card for each suit?
- 2. What is the probability of getting 3 cards of one suit and one of another?
- 3. What is the probability of getting 2 cards of one suit and two of another?

You flip a fair coin 5 times. Let A be the event that you get at least 2 heads, B the event that you get an even number of heads.

- 1. Compute P(A), and write it as a fraction.
- 2. Compute P(B), and write it as a fraction.
- 3. Determine whether A and B are independent.

In a certain manufacturing process, the (Fahrenheit) temperature is a random variable F with distribution

$$P_F = \begin{pmatrix} 60 & 61 & 62 & 63 & 64 \\ 1/10 & 2/10 & 4/10 & 2/10 & 1/10 \end{pmatrix}$$

- 1. Find E(F) and V(F).
- 2. Define T = F 62. Find E(T) and V(T), and compare these answers with those in part (a).
- 3. It is decided to report the temperature readings on a Celsius scale, that is, C = (5/9)(F 32). What is the expected value and variance for the readings now?

- 1. In how many ways can the letters of the word ROTOR be arranged?
- 2. What if we must leave T in the middle?
