

The Volume Cheat Sheet

* Note that these are the situations when rotating around axes. Modifications may be required to rotate about other lines.

Disk/Washer

Cylindrical Shells

Rotating about y-axis

$$Vol = \int_c^d A(y) dy$$

$$A(y) = \pi R^2 - \pi r^2$$

this integral in terms of y

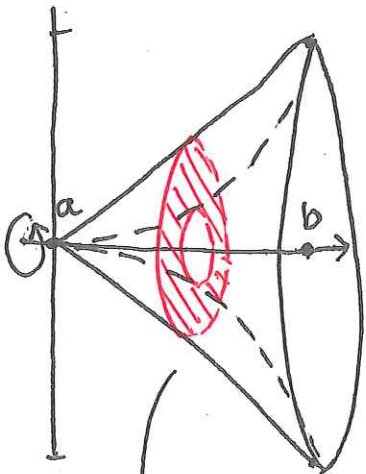

Circumference = $2\pi x$

$$Vol = \int_a^b 2\pi x f(x) dx$$

$f(x)$ = height of a cyl. shell w/ radius x

this integral in terms of x

Rotating about x-axis

$$Vol = \int_a^b A(x) dx$$

$$A(x) = \pi R^2 - \pi r^2$$

this integral in terms of x

$$Vol = \int_c^d 2\pi y f(y) dy$$

$f(y)$ = width of a cyl. shell w/ radius y .

Circumference = $2\pi y$

this integral in terms of y
